MEET THE ALL NEW CURATR LXP

We've combined our industry-leading expertise in Social and Personalized Learning with our award-winning Learning Record Store, Learning Locker, to create a truly powerful, next-generation **Learning Experience Platform**.

As digital learning continues to outgrow the traditional LMS, we've re-imagined our flagship Curatr platform to meet the needs of leaders (and emerging leaders) in the modern learning organization.

Whilst our methods have always meant low cost and great speed in talent development, we're now bringing lifelong learning and breakthrough analytics into the mix.

Curation at the Core

Make the best of your existing investments, quickly designing & delivering engaging learning experiences that are perfect for senior employees through curation.

Making it Personal

Curatr now understands your leaders' goals, personalizing activities, and content based on current role, ambitions, preferences and recommendations from peers.

AI-Powered

With breakthrough AI-powered recommendations, Curatr is at the cutting edge of Machine Learning for talent development.

Social Intelligence

Identify levels of critical thought and behavioral change using our exclusive text analysis feature, the Social Intelligence Dashboard, powered by TensorFlow.

Ready to Launch

Curatr LXP comes pre-loaded with expertly curated (free!) content covering the essential skills that leaders need to thrive in a learning organization.

THE EXPERIENCE LAYER

Activity Focus

Learning isn't a spectator sport. That's why we're the first LXP to focus learners on taking action and applying lessons back in the workplace. To help save time and to get you started, we're curating key learning activities and resources in advance; all as part of the service.

Recommendation Driven

Our recommendation engine is designed to enhance the user experience, but only if it's useful for the individual. Rather than bombarding with lots of options, we highlight a few key pieces, gaining feedback on how relevant our suggestions are to help create better recommendations over time.

Smart Reflection

Curatr LXP prompts users to reflect on their key takeaways from learning activities. We can then use these 'lessons learned' as spaced reminders, ensuring learning is brought back into focus, pushing users to keep up consistent effort, even long after a moment of learning has occurred.
